

The textbook will say that at some point in the past, there was only one continent called Pangea (Figure 2.1.1).

There is no empirical or observable science to support this.

However, the textbook will say that the best support of

Fig. 2.1.1 The movement of the continents.

Measurement	Length	Variation	Height	Variation
Africa 1	61	148.78%	53	88.33%
South America 1	41		60	85.94%
Africa 2	60	150.00%	55	
South America 2	40	145.24%	64	100.00%
Africa 3	61		56	103.85%
South America 3	42	150.00%	56	
Africa 4	57		54	
South America 4	38		52	

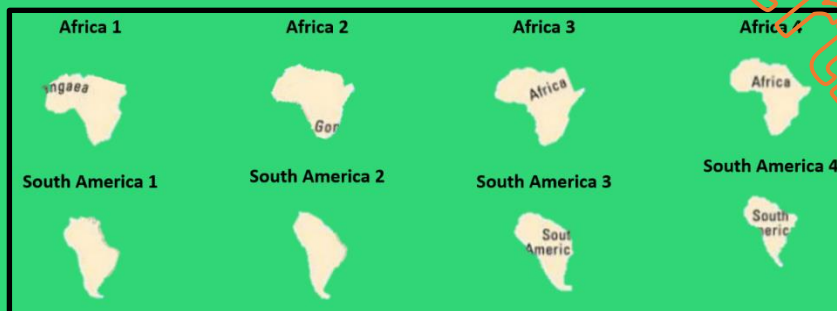

Fig. 2.1.2 The shift in dimensions and area.

this is how well South America and Africa fit together. The textbook will not tell you that the dimensions of the two continents are radically shifted in between the pictures (Figure 2.1.2). The reason that they must change the

dimensions in between the pictures is that the dimensions do not fit what the scientists expect to see. Furthermore, most of

Central America just appears between the third and fourth stages.

The reason that the textbook will ingrain the idea of Pangea is that it adds credence to saying that the Earth is millions of years old.
